

KASNEB

CIFA PART II SECTION 4

PORTFOLIO MANAGEMENT

FRIDAY: 26 May 2017.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

QUESTION ONE

- (a) The basic objective of portfolio management is to maximise investors' return and minimise risk. However, there are other auxiliary objectives as per the needs of each individual investor.

Required:

In relation to the above statement, highlight four auxiliary needs of an individual investor. (4 marks)

- (b) Propose six measures that a portfolio management firm could establish to ensure that its portfolio managers remain independent and objective while undertaking their duties. (6 marks)

- (c) The following information relates to the returns of security X and security Y over a five-year period:

Year	Returns (%)	
	Security X	Security Y
2012	10	20
2013	20	30
2014	30	50
2015	40	40
2016	50	60

Required:

- (i) The securities beta. (3 marks)

- (ii) The securities alpha. (2 marks)

- (iii) The residual variance. (2 marks)

- (iv) Interpret the results obtained in (c)(i), (c)(ii) and (c)(iii) above. (3 marks)

(Total: 20 marks)

QUESTION TWO

- (a) Assess the following investor personality types that could offer an insight to a portfolio manager when predicting investors risk-taking appetite and their decision making styles:

- (i) Cautious investors. (2 marks)

- (ii) Methodical investors. (2 marks)

- (iii) Spontaneous investors. (2 marks)

- (iv) Individualist investors. (2 marks)

- (b) Summarise four assumptions underlying capital asset pricing model (CAPM). (4 marks)

- (c) An actively managed portfolio has a transfer coefficient (TC) of 0.50 and an unconstrained information ratio of 0.30. The benchmark portfolio has a sharpe ratio of 0.40 and a risk of 16.0%

Required:

- (i) The optimal amount of aggressiveness in the actively managed portfolio. (3 marks)

- (ii) The sharpe ratio assuming that the actively managed portfolio is constructed with the amount of active risk. (3 marks)
- (iii) Determine how the active risk can be lowered to the optimal level of 6.0% assuming that the constrained portfolio has an active risk of 8.0%. (2 marks)
- (Total: 20 marks)**

QUESTION THREE

- (a) Explain three differences between “mutual funds” and “exchange traded funds (ETFs)” with reference to pooled investment products. (6 marks)
- (b) Evaluate five items that could be included in a framework for a disciplined approach to setting capital market expectations. (5 marks)
- (c) (i) Examine four differences between “time-weighted rate of return” and “money-weighted rate of return”. (4 marks)
- (ii) The following information relates to Akamba Ltd.’s portfolio for the month of March 2017:

	Sh. “000”
Fair value (28 February 2017)	16,575
Cash contribution (12 March 2017)	2,265
Fair value (12 March 2017)	19,550
Fair value (31 March 2017)	19,250

Note: The fair value on 12 March 2017 includes a cash contribution of Sh.2,265,000 received and available for investment on 12 March 2017.

Required:

- The time-weighted rate of return for the month of March 2017. (5 marks)
- (Total: 20 marks)**

QUESTION FOUR

- (a) (i) Explain the term “risk management”. (2 marks)
- (ii) Discuss four techniques of managing credit risk. (4 marks)
- (b) As a portfolio manager, explain how you could mitigate the following biases:
- (i) Gamblers’s fallacy. (2 marks)
- (ii) Overconfidence. (2 marks)
- (c) Jose Kigen, aged 40 years is a manager at a public limited company. He plans to retire at the age of 55 years. He is a divorcee and a father of teenage children. He intends to fund a dedicated trust to provide for his children’s needs until they reach the age of 25 years. He will require Sh.2.5 million in the next few months to fund the trust.

Jose Kigen’s income tax rate is 30%. Other than his cash reserve, he holds investment assets in a tax-exempt account with a current value of Sh.9 million. He saves Sh.250,000 of his after-tax income annually to the account and plans to do so until retirement. His next contribution will be made in one year’s time. As part of his normal expenses, he provides Sh.300,000 annual contribution to St. Elizabeth’s Children Home.

When he retires in 15 years time, he plans to purchase a 25-year annuity that pays Sh.1 million after-tax annually. He will need Sh.16 million at retirement to fund the annuity. He expects the annual payout to be sufficient to meet all his needs on an inflation-adjusted basis. He does not plan to leave any estate at the time of his death.

Required:

- (i) The required annual return that would enable Jose Kigen to purchase the retirement annuity at the age of 55 years. (6 marks)
- Note: All cash flows occur at the end of each period.
- (ii) Discuss four reasons that would make Jose Kigen’s ability to take risk to be considered above average. (4 marks)

(Total: 20 marks)

QUESTION FIVE

- (a) Ahmed Fadhili has decided to invest Sh.1 million by purchasing shares of two companies namely; ABC Ltd. and XYZ Ltd. The projections of returns from the shares of the two companies along with their probabilities are as follows:

Probability	Return projections (%)	
	ABC Ltd.	XYZ Ltd.
0.20	12	16
0.25	14	10
0.25	-7	28
0.30	28	-2

Required:

The proportion of each of the above shares required to formulate the minimum risk portfolio. (10 marks)

- (b) Berry Charo, an assistant fund manager at Adco Ltd. pension scheme which practices a passive management strategy has been provided with the following information about the fund manager's annual returns for the last 5 years:

Period	Fund Manager's returns (%)	Market returns (%)
2016	9.7	10.1
2015	14.6	13.0
2014	15.3	14.7
2013	12.7	12.5
2012	10.5	10.0

Required:

- (i) The fund manager's tracking error. (3 marks)
- (ii) Comment on the results obtained in (b)(i) above. (2 marks)
- (c) Zenith and Mackenzie Investment Consultants Ltd. employs a two factor arbitrage pricing theory (APT) model to measure portfolio risk and return for their clients investments.

The following information is available:

	Factor 1	Factor 2
Investment fund beta	1.5000	2.0000
Risk premium	0.0300	0.0125

The risk-free rate is 5%.

Required:

- (i) The expected return for the investment fund. (2 marks)
- (ii) Assume that Factor 1 improves by 33.33% while Factor 2 becomes adverse by 25.00%. Using suitable computations, establish whether there is any arbitrage gain in the expected return. (3 marks)
- (Total: 20 marks)**
-
