

KASNEB

CIFA PART III SECTION 6

INTERNATIONAL FINANCE

FRIDAY: 25 November 2016.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

QUESTION ONE

(a) Analyse four components of the financial account as used in the balance of payments of a country. (4 marks)

(b) Summarise five assumptions of the theory of comparative advantage as postulated by David Ricardo (1817). (5 marks)

(c) In an effort to integrate the world trade, a great milestone has been achieved towards globalisation of the world economy. World's businesses are turning to foreign sales and cross-border partnerships as paths towards expansion and consolidation.

In relation to the above statement, discuss four events and trends that could have contributed to the reduced restrictions and increased international trade. (8 marks)

(d) Explain three sources of short-term borrowing that could be used by a multinational corporation to finance its operations. (3 marks)

(Total: 20 marks)

QUESTION TWO

(a) The value of your country's currency has been experiencing a drastic downward decrease in value relative to other major world currencies.

In relation to the above statement, discuss four strategies that could be adopted by the central bank of your country to stabilise the local currency. (8 marks)

(b) Evaluate four benefits that could accrue to a multinational corporation (MNC) that uses bilateral netting. (4 marks)

(c) Assume that the following exchange rate information is available between the United States of America (USA) and Britain:

	USA	Britain
Nominal interest rate	4%	6%
Expected inflation rate	2%	5%
Spot rate	-	\$1.13
One year forward rate	-	\$1.10

Required:

(i) The forward rate of the British pound (GBP) assuming interest rate parity exists between the USA and Britain. (2 marks)

(ii) The expected spot rate of the GBP in one year assuming the purchasing power parity (PPP) holds between the USA and Britain. (2 marks)

(iii) The expected spot rate of the GBP in one year assuming the international fisher effect (IFE) holds between the USA and Britain. (2 marks)

(iv) Describe two methods that could be used to determine whether the purchasing power parity (PPP) exists among countries. (2 marks)

(Total: 20 marks)

QUESTION THREE

- (a) Evaluate three financial techniques that could be used by a multinational corporation to reduce its transaction exposure. (6 marks)
- (b) Jozovina Limited, a Kenyan based multinational firm, is considering investing in a project to be based in South Africa. The project will have an initial capital outlay of 125 million South African Rands (ZAR). The project will have a debt ratio of 60%.

The project is expected to generate the following free cash flows for the next 5 years:

Year	1	2	3	4	5
Net cash flow (ZAR "million")	25	28	30	35	40

Additional information:

- The economic data between the two countries are as follows:

	Kenya	South Africa
Inflation rate	14%	6%
Bond yield	10.7%	9%
Risk premium	12%	8%
Interest rate	14.5%	12%
Tax rate	30%	25%
- The spot exchange rate is 1 ZAR = KES14.
- The international Beta factor is 0.8.

Required:

- The weighted average cost of capital (WACC) of the project. (3 marks)
 - The net present value (NPV) of the project in Kenya shillings (KES). (10 marks)
 - Advise the management of Jozovina Limited on whether to proceed with the project based on your results in (b)(ii) above. (1 mark)
- (Total: 20 marks)

QUESTION FOUR

- (a) In an international trade forum, one of the facilitators noted that the majority of the developing countries and less developed countries normally have a budgeting deficit where expenditure exceeds revenue.

In relation to the above statement, propose three reasons which could trigger deficit financing in a given country. (3 marks)

- (b) Assess five objectives of the European Union (EU) trading bloc. (5 marks)
- (c) Discuss four operating structures that could help a multinational corporation (MNC) to manage its cash flows. (4 marks)
- (d) Assume the following information between the Canadian dollar (CAD) and the British pound (GBP):
- Spot rate of CAD = £0.4400
 - 90-day forward rate of CAD = £0.4345
 - 90-day Canadian interest rate = 4%
 - 90-day British interest rate = 2.5%

Required:

- The yield to a British investor who uses covered interest arbitrage. (Assume the investor invests GBP 1,000,000) (4 marks)
 - Propose the market forces that would occur to eliminate any further possibilities of covered interest arbitrage identified in (d)(i) above. (2 marks)
- (e) Distinguish between "tax drag" and "tax haven" in the context of international tax management. (2 marks)
- (Total: 20 marks)

QUESTION FIVE

- (a) In order to encourage foreign direct investment (FDI), many governments provide incentives to multinational corporations (MNCs) to set up industries in their host countries.

In relation to the above statement, explain six areas of conflicts that could arise between the MNC and the host government. (6 marks)

- (b) Assess five forms of political risk that could impede the performance of a local subsidiary. (10 marks)

- (c) Warfen Limited believes that future real interest rate movements will affect exchange rates and it has applied regression analysis to analyse historical data so as to assess the relationship. The corporation intends to use regression coefficients derived from this analysis along with forecasted real interest rate movements to predict exchange rates in the future.

Required:

In relation to the above statement, explain four limitations of using regression analysis forecasting method in predicting the foreign exchange rate. (4 marks)

(Total: 20 marks)

.....
